Plug-in File	jw_allvideos
ID	10041
Description	

JoomlaWorks 'AllVideos' Plugin v4.4 for Joomla!

AllVideos allows you to embed online streaming videos inside your content items as well as your own video or audio content that resides either on your server or some remote server. For example, you can use YouTube to upload your videos and then embed them inside your site using the easy AllVideos tags, without consuming your server's bandwidth or having to spend money on expensive video conversion software! Or you can choose to stream/play directly from your server any type of video or audio content uploaded.
